

# MobileIron Cloud

Organizations seeking the agility of the cloud to help them become Mobile First turn to MobileIron Cloud. MobileIron Cloud has been purpose built to provide cloud-based Enterprise Mobility Management. This helps end-users unlock the benefits of mobile to work smarter, faster and better while eliminating the chaos of managing and securing mobile devices, applications and content.

## Automate Mobile Security

Protecting corporate apps and content in a mobile network requires surgical precision in your mobile security. MobileIron Cloud combines the layered security of the MobileIron platform with the flexibility of cloud deployment. MobileIron Cloud will track and manage your mobile devices, apps and content enabling IT to quickly set dynamic policies based on state of the device, apps or data on the device, and connectivity to the corporate network. MobileIron Cloud provides organizations the visibility into their mobile network to make smarter decisions and take swift action to secure corporate resources.

## Move at the Speed of Mobile

Mobile has accelerated the speed of innovation and to keep up is almost a full time job. MobileIron Cloud quickly adapts new features with each release of devices, versions and operating systems and makes them immediately available to organizations. This enables organizations to provide end users with day zero support for devices of their choice. Additionally MobileIron Cloud enables IT organizations to accelerate their Enterprise Mobility Management Platform deployments by going from zero to production in minutes.

With every new device, the footprint of an organization increases. Today end users may have a single personal device they want to connect to the corporate network but tomorrow it may be three, five or ten. Scaling an enterprise management solution to meet tomorrow's needs is no simple task. With MobileIron Cloud, organizations can offload that task. Our Cloud platform is able to scale to millions of devices to support where your organization is going in the future.

## Focus on the Work – Not on the Tools

Employees, whether managing a mobile workforce or a member of the mobile workforce, are also consumers with the goal to get work done, efficiently and without hassle. Employees need easy, intuitive tools that enable work to be accomplished, not hinder it. MobileIron Cloud is built to integrate into everyday workflows, eliminating the need for training of IT or end users. An IT administrator can set up new hires quickly and easily distribute content and apps to end users in a few clicks. End users can find and manage their work apps and content using the same steps as they would their personal apps and files. MobileIron Cloud works the way employees want to work.

### Challenge

Securing and managing mobile devices, apps and content in a scalable, cloud-based solution

### Solution

MobileIron Cloud

### Benefits

Provides mobile device management, app management and content management capabilities

Integrates with on-premise enterprise services like LDAP directory and enterprise email.

Leverage the most trusted Mobile IT cloud service, with SOC 2 Type 2 audit, TRUSTe Privacy Seal, and operational transparency

## Enables Enterprise Mobility Management

### Mobile Device Management (MDM)

MobileIron Cloud provides secure management of corporate and user owned devices across multiple operating systems. It automates device configuration and setup, and integrates with directory services for user authentication and management. Administrators can quarantine and/or selectively wipe enterprise data from devices. It also enables end users access to corporate email on personal devices.

### Mobile Application Management (MAM)

MobileIron Cloud helps manages the application lifecycle by making apps available to end users via an app catalog for both public and corporate apps. It secures the applications on end user devices and separates them from personal apps.

### Mobile Content Management (MCM)

MobileIron Cloud provides end users an app that stores corporate content securely on their mobile device. Administrators can enforce policies such as authentication, file sharing and copy/paste restriction.

## Enterprise Integration

Organizations can deploy MobileIron Cloud with zero footprint. MobileIron Cloud also provides a hybrid solution with enterprise integration. MobileIron Sentry can be used on-premise with MobileIron Cloud to provide email access control for Microsoft Exchange. The MobileIron Cloud Connector provides real-time connectivity to backend AD/LDAP directory services for proper user authentication and integration with groups, business units, and users set up in the corporate directory.

## Security and Certifications

MobileIron Cloud is the most trusted Mobile IT cloud service in the industry. MobileIron Cloud has completed a SOC 2 Type 1 assessment to audit the operational and security processes of the service. MobileIron also has the TRUSTe Privacy Seal, signifying that the company's privacy policy and practices have been reviewed for transparency, accountability, and choice regarding the protection of customer information. In addition, TRUSTe has certified MobileIron's compliance with EU Safe Harbor.

## About MobileIron

MobileIron provides the foundation for companies around the world to transform into Mobile First organizations.
