

Penetrator

Scans Local & Public IPs
Best Vulnerability Scanning
Best Vulnerability Assessment
Easy Solutions to found vulnerabilities

vmware
READY

**Prevent Hackers from entering your server and network!
Vulnerability management is key to any security strategy**

The latest automated hacking tools can inflict damage across a network and across the world in a matter of minutes. Understanding the potential vulnerabilities within your system is vital to any security strategy.

Vulnerability management is key to any security strategy

Vulnerability Management

The Penetrator is a vulnerability management and penetration testing appliance for your network, which comes pre-loaded and ready to go.

It is a powerful and intelligent security assessment solution.

Comprehensive and Unlimited Vulnerability Scanning

With its comprehensive vulnerability database and the application of sophisticated auditing techniques, the Penetrator enables you to always be one step ahead of even the most skilled and advanced attackers. It has no limit on the amount of auditing nor limit on the number of IP addresses and is most certainly one of the strongest and most comprehensive vulnerability assessment solutions on the market.

Penetrator

Penetration Testing Appliance

Easy-to-understand Reporting

Reports can be customised and are available as XML, PDF or HTML files.

System vulnerabilities are categorised as either high risk, medium risk or low risk, together with name and details of each vulnerability and its remediation.

The report also gives a conclusion as to the overall security level of the audited system.

An executive summary is compiled specifically for management level review with both text and graphical details from the audit results.

Easy to install

The Penetrator is compatible with any operating system. It is easy to install, with minimal configuration. Installation wizards provide for fast set up.

Scalable and Upgradeable

The Penetrator is scalable for network growth and IP addresses.

Distributed Audit Capability

You can setup multiple Penetrator at different locations on the internal network and remotely via an encrypted secure connection connect them together. This allows distributed auditing, configuration and reporting from a centralized point.

Launch Real Exploits and Denial of Service Attacks

You can launch real exploits to verify that an identified vulnerability is exploitable. It is also possible to launch real Denial of Service attacks to test preproduction systems for stability.

Features and Benefits

- Vulnerability Audit
- Audits any OS
- OS Independent Interface
- 55,000+ Database Signatures
- Automatic Web Crawl Script Engine
- Distributed Auditing
- Unlimited Auditing
- Stand-Alone SFF or 1U Appliance
- XML, PDF and HTML Reports
- No Software Installation
- Multi User Support
- Finds SQL Injection
- Advanced Audit Options
- Launch Real Exploits
- Finds Cross Site Scripting
- Reports Branding
- Option for syslog remote logging
- Finds Web Errors
- Option for centralized update point
- Launch DoS & DDoS attacks
- Automatic Network Discovery
